

18 tips to keep your wig unbeweaveable

Most important tip!

1. Be careful! The Closure/Frontal are ventilated by hand in India and therefore the most sensitive part of the wig. Make sure your braids are as flat as possible before putting on the wig.

How to put on the wig:

Keep your head slightly bended and hold both sides of the wig. Slide the wig on (from front to back). Don't pull the closure/frontal to correct the wig, since this can tear the closure/frontal.

Wigcap tip

2. There is an adjustable elastic band attached at the inside of the wigcap to secure your wig. The wigcap also has two small adjustable straps and two wig combs in the nape area.

Closure/Frontal customization tip

3. The closure/frontal has already been customized but herewith some tips in case you prefer to customize more. Customizing the hairline is important to achieve a natural look. I advise to place the wig on a mannequin while plucking the hairline. I recommend thinning or small scissors to create baby hairs. Use a Lace tint and concealer to complete the natural scalp look. We have Lace tint available under 'Haircare products' on the website.

Secure the wig tip

4. Use Got2Be glued and Freeze spray or Bold Hold to secure your wig, for the best end result. When wearing your wig glue-less we advise wearing a Wig grip for extra support.

Nighttime tip

5. I recommend placing the wig on a wigstand or foam head while not in use to keep the wig in shape. You can buy these items at the Beauty Supply Store.

Brush tip

6. Use a wide toothed comb or brush to brush Indian Straight and Wavy textures. Only comb Indian Curly when damp/wet (preferably saturated with Conditioner). Use a wide toothed comb or a brush suitable for Curly hair to prevent frizziness and excessive shedding.

Wash tip

7. Wash the wig once a week or when necessary and always gently. Try to limit using shampoo since this will strip the weave from oil, dirt but also all moisture. Co-washing with conditioner will clean the weave as well without stripping all the moisture. Do not brush the wig when saturated with shampoo.

Please visit Be unbeweaveable's YouTube channel for a detailed video with wash instructions.

Wash tip

8. Squeeze the excess water from the wig with your hands after washing. Do not use a towel to prevent rubbing the cuticles in the opposite direction due to the rough fabric. Always air-dry your wig

Conditioner tip

9. Always use a conditioner to soften the weave, since shampoo only tends to dry out the weave. Preferably a conditioner without sulfates since this ingredient dries out the hair.

Sedal tip

10. Always use a Leave-In cream for Raw Indian Curly. Sedal is highly recommended to achieve moisturized and defined Curls. This product is tested by us and you can purchase Sedal on our website under the 'Hair Care products' section. Always use Sedal on wet/damp hair but never on dry hair. Sedal can also be used on Raw Indian Wavy.

Air-dry tip

11. It is recommended to air dry the wigs after washing. You can hang the wig using the elastic band that is attached on the inside.

Styling tip

12. Always use a heat-protectant when using heat. Please keep in mind that using excessive (high) heat can shorten the lifespan of the weave.
Tip: Blow dry or use a heated styling brush first on Raw Indian Straight and Wavy for a sleeker look. Try Perm or Flexi Rods for heatless curling results.

Serum tip

13. Use Serum as a finishing touch after styling. The serum will ensure shiny and soft hair. Only use a few drops to prevent greasiness.

Flawless curls tip

14. The hair is Raw it is therefore recommended to use hairspray for extra hold. Without hairspray the curl will fade faster.

Swimming tip

15. Always make sure to wear a ponytail or a braid while swimming to prevent the hair from tangling.

Bleaching

16. Please note that Bleaching Raw Indian Curly can make the curls looser. Hair extensions that are chemically treated are no longer raw. Be unbeweaveable is not liable for damage to hair extensions that have been caused due to any form of chemical treatment.

Knots tip

17. Bleaching the closure/frontal makes the knots looser. To preserve the longevity of the closure/ frontal and to prevent shedding as much as possible since the lace is very fragile, it is recommended to spray a knot adhesive on the inside of the closure/ frontal. The yellow Got2B Freeze spray can be used as well.

Recommended products

18. Heat Protectant: L'oreal Sleek it heat spray
Shampoo (limit use): Biosilk Silk Therapy, Sulfate free bingo hair care, Biotera anti-frizz intense smoothing
Conditioner: Biosilk Silk Therapy, Sulfate free bingo hair care, Biotera anti-frizz intense smoothing
