

14 tips to keep your I-tips unbeweaveable

Most important tip!

1. Ladies cut the ends! The hair is Raw, meaning the ends are unprocessed. Cutting the ends will give a healthy and full look. Always treat the I-tips as your own hair.

2. Wash tip

Only apply conditioner to the ends and mid length of your extensions. Avoid applying conditioner to the roots. Dry your hair immediately after washing the keratin tips can swell when wet. And if left wet on regular basis they can soften and crumble. We do not advise going to bed with wet hair.

Wash your hair using vertical movements not horizontal/ circular to avoid tangles.

3. Brush tip

Comb the I-tips well before washing. Do not brush Raw Indian Curly when dry. Start at the ends and work your way up. Brush with care to prevent excessive shedding. We advise holding the I-tips at the roots to avoid tension on the I-tips.

4. Brush tip when wet

Use a wide toothed comb or brush for Raw Indian Straight and Wavy hair when wet and saturated with conditioner. Comb Raw Indian Curly only when it is damp/wet and fully saturated with Conditioner to prevent tangling and use a Curly brush specifically for Curly hair.

5. Wash tip

Wash the I-tips when needed. It is important to avoid the hair getting oily. The keratin tips can soften once they are contaminated. Try to limit using shampoo on the hair since this will strip the hair from oil, dirt but also all moisture. Co-washing with conditioner will clean the hair as well without stripping all the moisture. Do not brush the hair when saturated with Shampoo.

6. Conditioner tip

Always use a conditioner! A good moisturizing conditioner is necessary to soften and moisturize the weave.

7. Sedal:

For Raw Indian Curly we recommend using Sedal. Sedal is a leave-in crème that leaves Raw Indian Curly moisturized and defined. Apply it on damp hair and apply the scrunching method. When using a hair dryer please make sure it's suitable for Curly hair so it won't make the hair frizzy. We recommend air drying but in case of i-tips air drying is sometimes not advised by the stylist in charge.

8. Styling tip

Always use a Heat Protectant while using heat. Please keep in mind that using excessive (high) heat can shorten the lifespan of the hair.

Tip: Blow dry or use a heated styling brush first on Raw Indian Straight and Wavy for a sleeker look. Try Perm or Flexi Rods for heatless curling results.

9. Serum tip

Use a serum after styling I-tips as a finishing touch, we advise Biosilk Therapy Original. Do not use much to prevent greasy hair, a few drops should be enough.

10. Flawless curls tip

Before you curl Raw Indian Straight or Wavy we recommend using hairspray. Remember the hair is Raw and not chemically treated. Hair spray will give the curls a better hold.

11. Swim tip

We do not advise swimming with loose hair, make a ponytail or braids to prevent tangling.

12. Bleaching

Please note that Bleaching Raw Indian Curly can make the curls looser. Hair extensions that are chemically treated are no longer raw. Be unbeweaveable is not liable for damage to hair extensions that have been caused due to any form of chemical treatment.

13. Recommended Products:

Heat Protectant: L'oreal Sleek it heat spray

Shampoo (limit use): Biosilk Silk Therapy, Sulfate free bingo hair care, Biotera anti-frizz intense smoothing
