

15 tips to keep your Raw Indian Curly hair unbeweaveable

Please note that your bundles straight from the package will not look defined yet. Because our curls are Raw you will need Sedal to define and moisture your curls.

Most important tip!

1. Ladies cut the ends! The weave is Raw, meaning the ends are unprocessed. Cutting the ends will give a healthy and full look. Always treat the weave as your own hair.

2. Weave installation

Please keep in mind it is always important to keep enough space in between the tracks especially in the nape area, it is therefore not advised to double tracks. The hair can tangle when tracks are too close on top of each other. Keep in mind that sweat or living in a hot a humid climate can also cause tangling especially when the hair is too close on top of each other.

3. Static hair tip

Sometimes the weave can get static/dry due to the shipment. All bundles are shipped in plastic packages from India. This issue can be solved by simply washing the bundles with Shampoo/Conditioner before the actual Wig or Weave installation. We always advise to wash your hair first.

4. Bedtime tip

Comb the weave before sleeping, divide your hair into 4 big braids to prevent knots. Always use a silk head wrap to keep the weave smooth and flat. If you have a wig, it's best to store it on a mannequin head.

5. Brush tip

Comb the weave well before washing. Start at the ends and work your way up. Brush with care to prevent excessive shedding. You may also finger comb/ detangle as much possible first. You may use a wide toothed comb, or a brush specifically designed for Curly hair.

Do not brush Raw Indian Curly when dry. It is always better to saturate the hair first with water and conditioner.

6. Wash tip

Wash the weave once a week or when needed. Try to limit using shampoo since this will strip the weave from oil, dirt but also all moisture. Co-washing with conditioner will clean the weave as well without stripping all the moisture. Do not brush the weave when saturated with Shampoo.

Please visit [Be unbeweaveable's YouTube channel](#) for a detailed video on how to wash Raw Indian Curly.

7. Wash tip

Squeeze the excess water after washing out of the weave with your hands. Do not use a towel because the fabric is rough, leaving the hair cuticles in the opposite direction. Always air-dry. Using a hair dryer can cause frizz when done incorrectly.

8. Conditioner tip

Always use a conditioner! A good moisturizing conditioner is necessary to soften and moisturize the weave.

9. Sedal:

It is very important to use a Leave-In Cream to define and moisture Raw Indian Curly, We highly recommend Sedal. Sedal is a lightweight leave-in crème that leaves Raw Indian Curly moisturized and defined. Apply it on damp hair, apply the scrunching method and let the hair preferably air-dry. Do not use Sedal on dry hair. **Please visit**

Be unbeweaveable's YouTube channel for a detailed video on how to apply Sedal on Raw Indian Curly and the 'scrunching' method.

If you prefer a heavier styling product you may also experiment with product such as Gel. Please keep in mind that most Gels have a drying effect and could make the weave feel dry.

10. Styling tip

Raw Indian Curly can be styled but please keep in mind that when done excessively the curls can damage. Always use a Heat Protectant while using heat. And please keep in mind that using excessive (high) heat can shorten the lifespan of the weave.

Tip: Blow dry or use a heated styling brush first for a sleeker look. Try Perm or Flexi Rods for to adjust the curl pattern without using heat.

11. Serum tip

Use a serum after styling the weave as a finishing touch, we advise Biosilk Therapy Original. Do not use much to prevent greasy hair, a few drops should be enough. This serum can also be used on the curls in its natural state.

12. Swim tip

We do not advise swimming with loose weave, always make a ponytail or braids to prevent tangling.

13. Maintenance tip

We do not advise leaving the weave installation longer than 2 months. It is important to let the natural hair rest in between. Wearing the weave too long could damage the natural hair. The weave can be reused, just do not forget to clean the weave properly.

14. Bleaching

Please note that Bleaching Raw Indian Curly can make the curls looser. Hair extensions that are chemically treated are no longer raw. Be unbeweaveable is not liable for damage to hair extensions that have been caused due to any form of chemical treatment.
